CLAIMS

- 1. An immunostimulating agent which comprises a complex of an immunostimulating oligonucleotide and a polysaccharide having β -1,3-bonds.
- 2. The immunostimulating agent of claim 1, wherein the immunostimulating oligonucleotide contains an unmethylated CpG motif.
- 3. The immunostimulating agent of claim 1, wherein the phosphoric acid backbone of the oligonucleotide is phosphorothioate-modified or phosphorodithioate-modified
- 4. The immunostimulating agent of claim 1, wherein the polysaccharide having β -1,3-bonds is β -1,3-glucan or β -1,3-xylan.
- 5. The immunostimulating agent of claim 1, wherein the β -1,3-glucan is selected from among schizophyllan, curdlan, lentinan, pachyman, grifolan, laminaran and scleroglucan.
- 6. The immunostimulating agent of claim 1, wherein the polysaccharide is modified with nucleic acid-binding functional group and/or cell membrane-affinitive functional group.
- 7. The immunostimulating agent of claim 1, wherein the complex of the oligonucleotide and the polysaccharide is of a triple helix structure formed through hydrogen bonds and hydrophobic interactions.
